The Center for Secure Cyberspace (CSC) announces the 3rd Cyberspace Research Workshop (CRW'10) to be held on November 15, 2010, in conjunction with the Air Force Global Strike Command Technology and Innovation Symposium at the Shreveport Convention Center in Shreveport, LA. The CSC is a collaborative effort of Louisiana Tech University and Louisiana State University converging through a workshop to provide a venue to discuss emerging technologies, share ideas, and create opportunities for researchers and practitioners in various areas of cyber security.

This year's theme centers on security in a cyber-centric world, where cohabitation with malware is presumptive. Cyberspace is increasingly becoming more mainstream and an active part of our lives. Cyberspace has become laden with risks, predominantly due to the explosion of malware and malicious entities.

While research attempts to address security within cyberspace, have been extensive, it is incumbent upon us to also consider an environment where people and malware cohabit. The purpose of CRW'10 is to engage in discussions that address cyber security in such an environment by analyzing problems and finding solutions in a wide range of relevant areas.

Topics for CRW'10 include, but are not limited to the following:
- o Strategic Cyber Defense
- o Global Cyber Situational Understanding
- o Malware and Anti-Malware Technologies
- o Coping with Malware
- o Security Policy, Legal Issues, and Information Warfare
- o Cyberspace and the Human Element
